Education

Indian Institute of Technology, Jodhpur

B.Tech - Computer Science and Engineering, **CGPA: 9.38**

Expected Graduation: May 2027

Jodhpur, Rajasthan

Experience

Software Engineering Intern - AI and Computing

May 2026 – Present

Google Hyderabad, India

- Engineered an analytics framework for Virtual Machine (VM) mapping strategies, optimizing system performance to execute **20x faster**.
- Overhauled complex VM mapping queries, slashing latency by over **99%** (from **3.5 seconds** to **under 10 milliseconds**).

Software Development Intern

January 2026 – March 2026

GumboTech Remote

- Architected and deployed a high-throughput full-stack streaming application, supporting over **10,000** concurrent users with **sub-500ms** latency.
- Optimized the media delivery pipeline and WebSocket/WebRTC connections, reducing buffering rates by **35%** and decreasing initial load times by **40%**.

Algorithm Developer Intern

November 2024 – December 2024

R2G Logistics Gurugram (Hybrid)

- Implemented route optimization algorithms (A*, Christofides) to compute shortest paths across 15-20 delivery locations, improving efficiency by **30%**.
- Achieved a **70% reduction** in new driver training costs using Java, data structures, and graph-based optimizations.

Research Experience

Undergraduate Student Research

March 2025

Indian Institute of Technology, Jodhpur Clustering Streaming Data

- Implemented and tested an incremental BFS algorithm on C++/CUDA for streaming graphs and processed **100K updates/sec** on large-scale graphs (up to 1B nodes, 500M edges), achieving **3x speedup** and **70% recomputation reduction**.

Projects

FastDevFs: A Developer Oriented FileSystem | GitHub

March 2026

- Created a developer oriented file-system to reduce package bloat using LibFuse.
- Benchmarked the file-system on sequential read/write to perform **1.6-1.7x** better than ext4.

LIBR: A Censor Resilient Platform | GitHub

March 2025

- Developed LIBR: a decentralized forum framework using **DHTs and blockchain**, with fault tolerance via **Byzantine consensus**.
- Engineered LIBR's modular architecture (Go modules for Clients, Moderators, DB Nodes) and partial message immutability for reconfigurability.

Route Optimizer | GitHub

November 2024

- Integrated **A* algorithm** with **KD tree** to optimize delivery routes, enabling efficient shortest-path calculations.
- Improved path computation speed by **40%** in simulations involving 50+ delivery points.

Technical Skills

Programming Languages: C++, Python, Java, JavaScript, HTML/CSS, SQL

Libraries/Frameworks: React, Socket.io, Scikit-Learn, NumPy, Pandas

Concepts/Tools: Machine Learning, Git, Software Engineering, Team-Work

Achievements

- Secured **AIR 1616** (JEE Advanced) – Best in the Batch
- Achieved **1642** rating on Codechef
- Solved more than **550** problems on Codeforces
